Cheffelo Sustainability Policy

Cheffelo is committed to the sustainable development of its business, taking economic, environmental, and social aspects into account. The UN global goals form a basis from which we set long-term goals, follow up and report on our sustainability ambitions and sustainability work. Transparency is an important basic principle, and we ensure that all operations, including operations conducted with suppliers, comply with current legislation, regulations and industry practice. We further ensure that all employees have the conditions, knowledge, and sufficient information to be able to comply with this policy.

Cheffelo undertakes to:

- Minimize food waste for consumers and in our own production and create conditions for producers and suppliers to minimize food waste in the production of food.
- Deliver food that everyone can trust and take great responsibility in carefully selecting products from reliable suppliers. For us this implies that we:
 - procure animal-based protein from suppliers where good animal welfare is of the utmost priority.
 - follow development in sustainability matters and strive to offer customers sustainable alternatives.
 - actively seek to reduce the amount of packaging and drive the transition to more environmentally friendly packaging materials.
 - enable and encourage consumption of healthy food and healthy eating behaviors.
- Take great responsibility for the impact of our business and work to minimize the resources consumed and impact on the climate.
- Work towards being a good world citizen and in doing so we consider all stakeholders effected by our business.
